

Comparative results over 45 days treatment

Client: 65-year-old female with hypertension, osteoporosis – pain and fatigue.

81% strengthening wall of aorta | 70 % strengthening thyroid gland | 43% decreasing of inflammation

Research mode allows to compare the received signals from the head-phones to the stations. The results are presented on the Flender's scale, 6 various icons designating the following levels (Fig.23):

	lower limit of normal		mild changes (pre-clinical stage of disease)
	standard		change of the average degree (clinical stage of disease)
	upper limit of normal (transition state, the functional changes)		pronounced changes
